EDUCATION

B.Tech, Artificial Intelligence and Machine Learning 2024 – 2028
St. Joseph's College of Engineering, Chennai CGPA: 8.0/10

TECHNICAL SKILLS

Languages	Python, SQL, C++, C, Java
AI/ML	PyTorch, TensorFlow, Scikit-learn, OpenCV, Transformers, NLP, CNNs
LLMs & Agentic AI	LLMs, AI Agents, Multi-Agent Systems, RAG, LangChain, LangGraph, MCP
Backend/Databases	FastAPI, Flask, REST APIs, RBAC, PostgreSQL, MySQL, Redis, Qdrant, pgvector
Cloud/DevOps	AWS, Azure, Docker, Git, GitHub
Core CS	DSA, OOP, DBMS, OS, Computer Networks

EXPERIENCE

AI Intern Feb 2026 – Apr 2026
Infosys Springboard

- Turned raw audio into text transcripts and short summaries by building **TranscribeFlow**, a Flask app using Whisper and T5-small with MySQL storage, file upload, and in-browser recording.
- Exposed transcription and summarization as REST APIs with downloadable outputs and modular processing stages.

Machine Learning Intern Jun 2025
Elewayte (Wipro DICE ID)

- Built and evaluated predictive models across the ML workflow: preprocessing, feature preparation, training, and evaluation.

PROJECTS

Student Readiness Intelligence Platform Live Demo
Team Lead (5 members) — Ongoing · LangGraph, RAG, MCP, FastAPI, PostgreSQL, Docker

- Architected a stateful LangGraph agent (**6** nodes, conditional routing, PostgreSQL checkpointing) that turns verified scores across the **12**-parameter framework into personalized **30/60/90-day** plans, while scoring stays deterministic.
- Designed a three-agent planning pipeline (Roadmap Architect, Resource Curator, Critic), in which the Critic audits effort estimates, task specificity, and coverage of the top-priority gap, and can trigger one refinement round.
- Eliminated hallucinated learning links by stripping all LLM-generated URLs and taking resources only from **5** search tools (YouTube, GitHub, DuckDuckGo, arXiv, Semantic Scholar) built as MCP servers, called by a tool-calling curator agent and also exposed as a standalone MCP server over stdio/SSE.
- Integrated the shared RAG layer (BGE embeddings, **768**-dim, pgvector) to retrieve student-specific context for at-risk and developing students and to rank search results by semantic relevance, with parallel searches cached for 6 hours.
- Improved resilience with role-based LLM fallback chains (self-hosted Qwen, Claude, Gemini, Groq), prompt-injection sanitization of student input, and a hermetic suite of **164** tests that runs with no network or API keys.
- Led AI development as AI & Agent Lead for the college's placement platform handling **10,000+** users, serving the agent as a FastAPI service behind the AI gateway in Docker.

Memora – Multi-Tenant RAG Chatbot GitHub
Python, FastAPI, PostgreSQL, Qdrant, Redis, Docker

- Delivered grounded, cited answers over each user's own documents by building a RAG backend on FastAPI, PostgreSQL, and Qdrant, with BGE embeddings (**768**-dim) and a Groq-hosted LLM.
- Kept answers tied to their sources by refusing without an LLM call when nothing relevant is retrieved and compressing retrieved context to a **6000**-character budget.
- Isolated every tenant's data by filtering all Qdrant searches on `user_id` and guarding prompts with an **11**-pattern injection filter, packaged as a **5**-service Docker Compose stack.

ArtDetector GitHub
FastAPI, React, PyTorch, EfficientNet-B0

- Reached **90.6%** validation accuracy in detecting AI-generated artwork by training a PyTorch EfficientNet-B0 classifier.
- Served image and video analysis with authentication and prediction history through a FastAPI backend and React frontend.

ACHIEVEMENTS & CERTIFICATIONS

- **Achievements: 1st Place**, Innovation Smart Hackathon; GSSoC **2026**; Open Source Connect India **2026**.
- **Certifications:** AWS Certified AI Practitioner (**2026**); Oracle Cloud Infrastructure **2025** AI Foundation Associate.
- **Competitive Programming: 700+** LeetCode problems; AtCoder **900+**; Codeforces **1200+**.
