EDUCATION

B.Tech, Artificial Intelligence and Machine Learning 2024 – 2028
St. Joseph's College of Engineering, Chennai CGPA: 8.0/10

TECHNICAL SKILLS

Languages	Python, C++, C, Java, SQL
AI/ML	PyTorch, TensorFlow, Scikit-learn, OpenCV, Transformers, NLP, CNNs
LLMs & Agentic AI	LLMs, RAG, LangChain, LangGraph, MCP, Qdrant
Backend/Databases	FastAPI, Flask, REST APIs, MySQL, PostgreSQL, Redis
Cloud/DevOps	AWS, Azure, Docker, Git, GitHub
Core CS	OS, Computer Networks, DSA, DBMS, OOP, RBAC

EXPERIENCE

AI Intern Feb 2026 – Apr 2026
Infosys Springboard

- Turned raw audio into searchable transcripts and short summaries by building **TranscribeFlow**, a Flask web app powered by Whisper and T5-small, with MySQL storage and support for both file uploads and browser-based recording.
- Made transcription and summarization usable beyond the web UI by developing REST APIs with downloadable outputs, built on modular audio-processing workflows.

Machine Learning Intern Jun 2025
Elewayte (Wipro DICE ID)

- Delivered predictive models and a measured view of their performance by running the full ML workflow: data preprocessing, feature preparation, model training, and evaluation.

PROJECTS

Student Readiness Intelligence Platform Live Demo
Team Lead (5 members) — Ongoing

- Led a team of **5** building the college's official placement platform, designed to support **10,000+** users.
- Automated skill-gap analysis across **12** parameters and personalized **30/60/90-day** plans by developing a LangGraph agent with RAG, MCP, and Pydantic.
- Kept each role's access separate by building role-based access control (RBAC), plus a dedicated AI assistant for mentors and administrators.

Memora – Multi-Tenant RAG Chatbot GitHub
Python, FastAPI, PostgreSQL, Qdrant, Redis, Docker

- Delivered grounded, cited answers over each user's own documents (PDF, DOCX, Markdown, HTML, CSV) by building a RAG backend on FastAPI, PostgreSQL, and Qdrant, with BGE embeddings (**768**-dim) and a Groq-hosted LLM.
- Kept every tenant's data isolated by tagging each Qdrant vector with a `user_id`, filtering all searches and deletes by it, storing files per user, and taking identity only from the verified JWT.
- Blocked prompt-injection and brute-force abuse with an **11**-pattern injection guard, Redis rate limiting (**120** req/min, **10**/min on auth), and account lockout after **5** failed logins.
- Made the system deployable and observable by packaging a **5**-service Docker Compose stack with Prometheus metrics and structured JSON logging.

ArtDetector GitHub
FastAPI, React, PyTorch, EfficientNet-B0

- Reached **90.6%** validation accuracy on detecting AI-generated artwork by training a PyTorch EfficientNet-B0 classifier.
- Let users analyze both images and video by building a FastAPI backend and React frontend with authentication and prediction history.

ACHIEVEMENTS & CERTIFICATIONS

- **Competitive Programming:** **700+** LeetCode problems; AtCoder **900+**; Codeforces **1200+**.
- **Achievement:** **1st Place**, Innovation Smart Hackathon.
- **Certifications:** AWS Certified AI Practitioner (**2026**); Oracle Cloud Infrastructure **2025** AI Foundation Associate.
- **Open Source:** GSSoC **2026**; Open Source Connect India **2026**.
